

Searching by Radius

1.1 Search Functionality

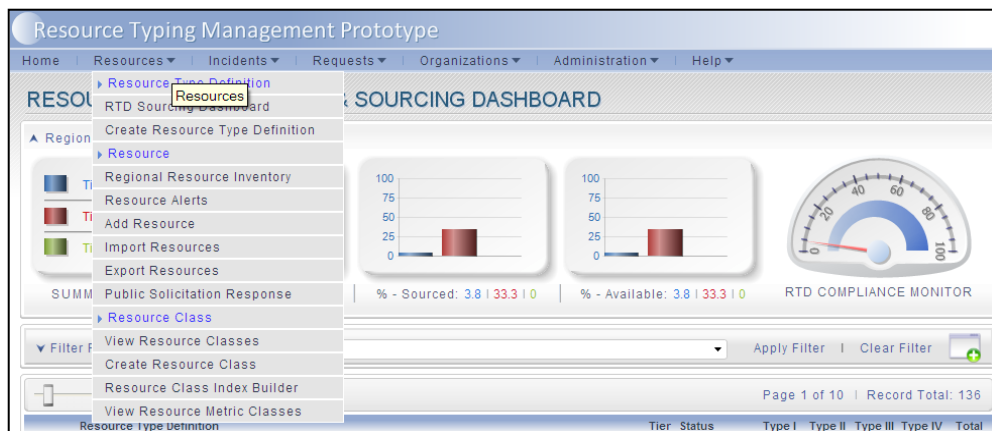

PARTS has the capability to search for resources via various methods, including radial proximity to a specified location on a map.

1.2 Radial Search Application

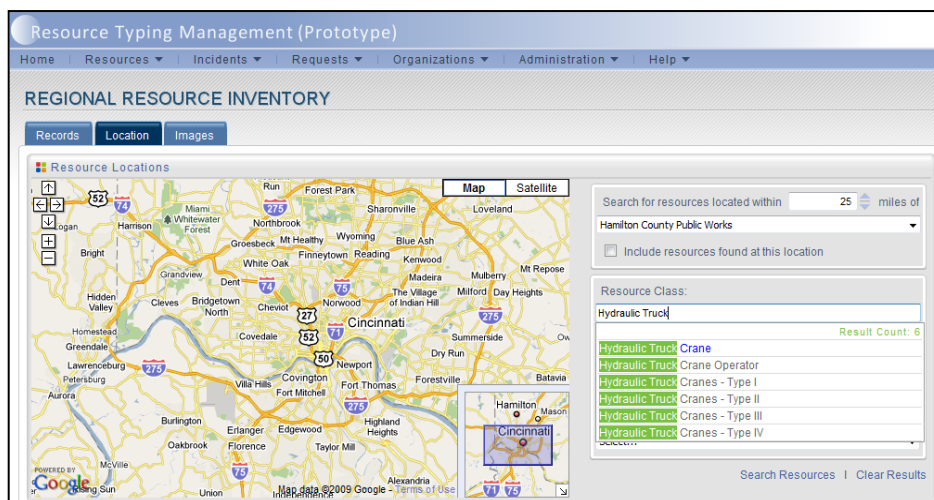

Whether in response to an incident or training exercise, Radial Search can be a useful feature. Within the PARTS system, an authorized user can use a geographical location on a map to identify resources in the area. This feature is designed to provide effective and quick information to Emergency Managers and/or Personnel.

1.3 How to Search by Radius

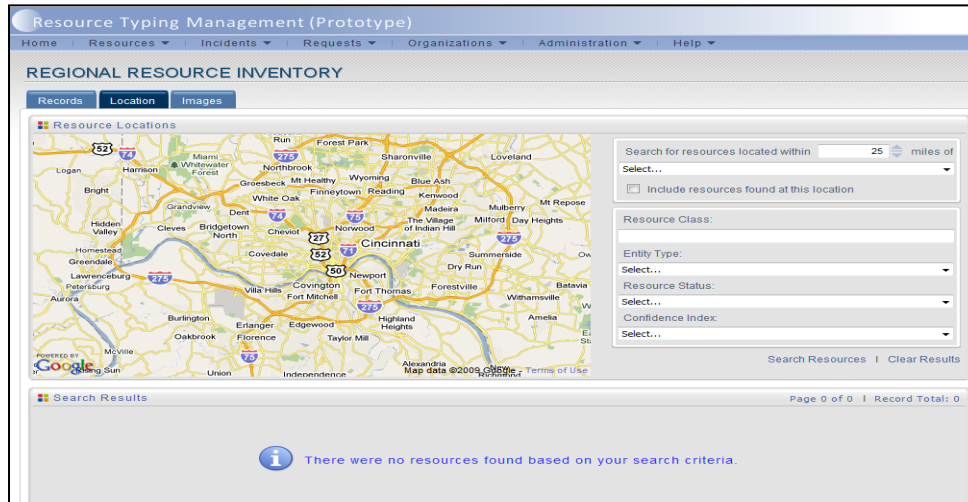

1. Begin by logging into PARTS and selecting “Regional Resource Inventory” from the Resources menu listed across the top.

2. Select “Location” from the tabs listed, then select an originating point and begin typing the name of the resource requested. Select Search.

3. From the displayed search results, select the resource to request.
